Solve Your Documentation Problems with Opal

CHALLENGE

Managing application delivery is challenging. If you're responsible for the entire tech stack for a line of business, you need to support a rapid pace of change from the business, while ensuring cost doesn't go out of control. If you're providing a horizontal service, you need to provide an efficient solution that can meet the needs of a diverse set of demanding business users.

In either case, you need to manage headcount and do more with less, because downward cost pressure is a constant. A perennial challenge is whether to buy or build: you need a solution that delivers flexibility and scale to gain competitive advantage, while at the same time you want to avoid using your precious headcount building commodity functions, or building high cost systems that only serve one line of business.

To learn more about our approach to document management with the Opal platform, contact us at info@voxfp.com.

TRADITIONAL APPROACH

In-house solutions for a specific vertical business need can be a good solution, but typically has a higher ongoing cost as you will have to maintain and support it for years to come. A horizontal approach provides efficiency by servicing multiple lines of business, but it can be strained to support many business lines and will limit the speed of any one business to change.

Meanwhile, legacy product solutions are often walled gardens or "black boxes" - not interoperable with enterprise systems, don't scale, use proprietary desktop applications or data formats, and may require material infrastructure investment (e.g. dedicated data center hardware).

A MODERN APPROACH: OPAL

Opal is a modern, easy-to-use software platform that streamlines the production of complex documents to help organizations better create, automate and manage contracts across the enterprise. Opal manages the end-to-end contract update process, from creation of document templates to bulk emailing client documentation to the execution of agreed contracts. Opal also provides management with real-time insights needed to execute these complex repapering exercises efficiently.

HOW IT WORKS

- Opal streamlines the production of flexible, template-driven documents for a range of use cases including managing the ongoing changes to regulatory documentation or handling complex product documentation
- Opal creates templates in Word; re-use and combine templates to support rich, complex use cases
- Opal integrates with enterprise applications using Opal's API to create documents as part of your existing workflow, using Opal as a service for documents
- Document data is preserved in Opal's database to support easy reporting and reconciliations without having to manually review files or paper

TOP FOUR BENEFITS

1. One tool for many documentation use cases (product documentation, regulatory documents, legal negotiations... Opal is content-neutral)
2. Powerful template authoring in a familiar Microsoft Word environment
3. Seamless integration with existing enterprise technology and workflows - Opal can be used as a service via its open API
4. Different lines of business can have their own instances - does not need one monolithic instance; can be delivered in the cloud or on-premise, or as a managed bureau solution
